

GPS' ENROLLMENT ADMINISTRATOR

Global Pharmaceutical Solutions (GPS) has developed a comprehensive web-based Medicare Part D enrollment administration tool that features:

- **Maintenance of plan sponsor's enrollment database in GPS' system with logic to determine enrollment / disenrollment / plan / benefit changes from a single plan sponsor enrollment extract**
- **Live enrollment database is accessible online for real-time changes and ad-hoc reporting**
- **TRC actions are customizable by the plan sponsor at a contract, PBP and group level to meet internal enrollment and/or client enrollment maintenance needs**
- **GPS' systems and logic are flexible to accommodate CMS regulatory and administration changes**
- **GPS' TRC processing logic incorporates triggers to support required beneficiary mailings, and beneficiary status designations (Enrolled, Disenrolled, Declined, Pending and Cancelled)**
- **GPS' enrollment system will provide an enrollment file in any PBM format that incorporates all CMS enrollment responses to support accurate claims processing**
- **Complete audit trail of all enrollment changes reflecting before and after values, user or system change designations and a time-stamp for all fields changed**
