

“Part D sponsors are required to coordinate with State Pharmaceutical Assistance Programs (SPAPs) and other providers of prescription drug coverage with respect to the payment of premiums and coverage, as well as coverage supplementing the benefits available under Part D.”*

Unfortunately, plan sponsors have been challenged with bad data, manual processes and systems that do not accommodate multiple payer information.

GPS Connection:

Global Pharmaceutical Solutions is now offering the GPS Connection tool as a cost effective solution for the administration of coordination of benefits within the Medicare program. GPS Connection enables plans to maintain compliance with Medicare coordination of benefits requirements while saving time and money. GPS Connection will facilitate ECRS submission for COB survey results, unmatched NI records or other health provider payments. ECRS responses will be processed and formatted to support provider / member mailings and data files for claims administration.

GPS Connection also facilitates Section 111 (MSP reporting) as well as enrollment and claim files transmissions for COBA participants. This enables plans sponsors to consolidate all COB operations with one trusted vendor.

GPS Connection accepts data on a batch basis, but also provides a web based user interface to enable plan sponsors a real time option for viewing and updating member coverage information.

Benefits derived from the use of GPS Connection include:

- **Compliance with Medicare requirements**
- **Improved accuracy of gross drug cost and TrOOP accumulations**
- **Cleaner and more accurate COB data for claims administration**
- **Reduction in manual administration**
- **Electronic claim files for payment of secondary claims**

If you would like to hear more about GPS Connection, please contact Erin Costell, Managing Partner of Global Pharmaceutical Solutions, by phone or email:
